MK11 SEMI-KIT

**H.M.S.
ROYAL OAK**

The MK2 Semi-kit is a method of supplying the modeller with the requisite parts and information to construct a large model where we have followed the construction of the prototype to completion. Models in the range are chosen for their large size, difficulty or unusual design for the modeller who wishes to construct a large or difficult model or something a little out of the ordinary that makes the prototype unlikely to be developed in to a full kit.

The semi-kit does not contain any instructions or parts for the decks and superstructure as this is left to the modeller who by the nature of the project will be well versed in developing the project to its basic construction.

H.M.S. ROYAL OAK glass fibre hull

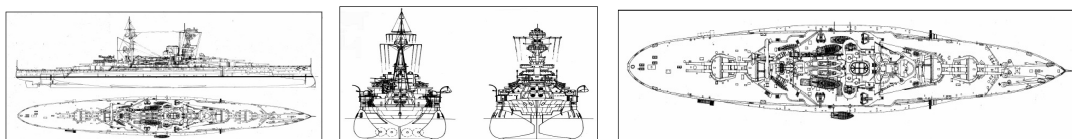

£135..00

The length of this model is 78" with a beam of 13".

Full plating detailed hull, armour belt, portholes and engine room inlets are moulded into this glassfibre hull. The hull is moulded in heavy weight glass to give support without the need of a inner liner or a large amount of bulkheads.

PLANS

A set of Plans are available from the MOULDEANS range at 1/96th scale including , plan, profile, bow and stern view, plus detail X section drawings of the superstructure.

£55..00

RUNNING GEAR A full set of running gear including 2 x 12" propshafts & 2 x 14" propshafts to the same high standards as produced in our kits.

£54 ..00

FITTINGS A list if fittings from our production range of 1/96 scale Standard warship fittings cast in light alloy and cast plastic that are suitable to be used on the model.

Each item is shown on a parts listing giving its part number, description, a size graph and a colour picture of each item to aid identification.

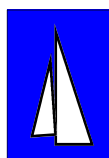

All items are individually priced

Special fittings These specially produced parts are specific to the model. are of the more complicated items, such as the armoured directors and the main turrets in glass fibre. As before each item is shown on a parts listing giving its part number, description, a size graph and a large colour picture the part.

All items are individually priced

MK11 SEMI-KIT

**H.M.S.
ROYAL OAK**

CRANE JIB SET
Crane jib set, Laser cut
from heavy gauge nickel
silver sheet

MAIN DRIVE SET

A set of 4 motors / gearboxes to use with this model + 4 x black-crome nylon double joint couplings plus 4 x brass propellers

VACFORMED SHEETS.

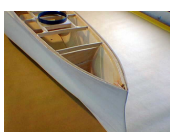

These sets of vacformings are made for the ROYAL OAK only and speed construction considerably. They include Funnels, alternative turrets in vacformed plastic, ships boats etc

INFORMATION

A C/D containing pictures (approx 30) taken during the basic hull construction of the prototype models plus a further 100+ pictures of the completed model including many close up details shots of the original model is available from Deans Marine

This is a company model development C/D and contains all the pictures of the prototype models. There is no written text or explanation notes on the files.

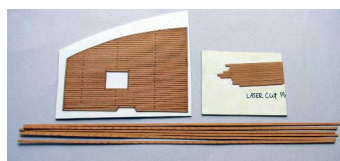

C/D £22..00 Contains £20.00 voucher for hull purchase

LASER CUT DECK PLANKS

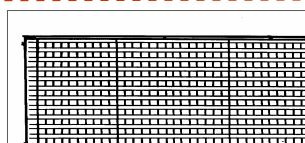

Laser cut planks developed by Deans Marine for use on the museum and display professional model making arm of the company These planks are cut from boxwood by optical lasers giving a perfect cut plank with SQUARE edges enabling a uniform plank runs and a perfect "caulk" line to be obtained with ease.

Plank size 3mm x .6mm Lengths of 300mm packs of 60

BE-3 Brass etched single stanchions.

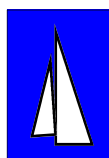

These individual stanchions are for the professional glasscase modeller and those that require finer detail on ship models. Admiralty pattern stanchions in two & three rail format with support legs. Approx 170 stanchions in a set These stanchions are etched in 12th spring brass for ease of fitting in deck by drilling or heat sinking.

BE-4 Brass etched vertical ladders

Vertical brass etched ladders. 4mm width in 3" & 4.5" lengths. 11 lengths on a fret.

BOOKS We also suggest that the book Profil Morske ROYAL OAK will be an invaluable guide to the construction of this model. (Limited availability)
